

# Adding a Gallery to a Blog

For this to work, of course you will need to install the [RainLab Blog plugin](#).

You may also want to read our [OctoberCMS Blog Quick Start Guide](#) if you haven't yet set up a CMS page to display your blog posts.

Open one of the posts on your blog and you can see that there is a new "Galleries" tab:

The screenshot shows the OctoberCMS backend interface for editing a blog post. The top navigation bar includes links for Dashboard, CMS, Media, Galleries, Pages, and Blog. The left sidebar has options for New post, Posts, and Categories. The main content area is titled 'First blog post' with a slug of 'first-blog-post'. Below the title, there are buttons for Save, Save and close, and a trash icon. The 'Galleries' tab is selected, showing a section titled 'Which galleries would you like to add to this post?'. This section contains two checkboxes: 'Patterns in Nature' and 'U.S.A.'. Below this is a 'Media Folder' section with a dropdown menu labeled 'Select gallery folder'.

Here you can select one or more galleries created on the Galleries backend page, or one media folder.

Note that you are only shown those folders which are subfolders of the root folder you set for the blog component on the November Gallery settings page:

# Blog Entry

Save
Preview

Post
Displays a blog post on the page.
</> blogPost

Embedded Gallery
Show a gallery of images in your page using various layouts, with optional full-screen (lightbox-style) viewing.
</> embeddedGallery

Markup
Code

```

1 <header>{{ post.title }}
2 <main>
3   {% if post %}
4     <h2>{{ post.title }}
5     {% if post.excerpt %}
6       <h3 style="margin: 0;">{{ post.excerpt }}
7     {% endif %}
8     {% component 'embeddedGallery' %}
9     <div class="content">
10       {{ post.content }}
11     </div>
12     <div>
13       {% if post.featured %}
14         <div class="featured">
15           {% for image in post.featured %}
16             <p>
17               <img alt="{{ image.description }}" style="max-width: 100%;" data-bbox="{{ image.url }}" data-kind="parent" data-rs="2" />
18             </p>
19             <p>{{ image.description }}</p>
20           </div>
21           <div class="description">
22             {{ image.description }}
23           </div>
24         </div>

```

Embedded Gallery
Show a gallery of images in your page using various layouts, with optional full-screen (lightbox-style) viewing.

Alias	i	embeddedGallery
Max Images	i	100
Media Folder or Gallery	i	Select gallery folder
Gallery Layout	i	
Tile Layout	i	/budapest
Thumbnails Layout	i	/plants-and-flowers
Script options	i	/travels-and-landscapes
> Thumbnails		Patterns in Nature
> Gallery Dimensions		U.S.A.
		> Take from RainLab Post

And voila, your blog includes images (this is a demo page, fairly ugly but that's not the point):

# November Gallery in a Blog Post

This is a demo of November Gallery attached to a blog post (shown above this post). Additionally, "Features Images" are also added, these are shown below the post. You can compare the two!

Posted: 2019

Now for some filler "text" so this looks like an actual blog post...it actually my motivation statement for joining the Peace Corps back in 2006. Ah, nostalgia...

Our minds are undoubtedly the strength that sets us apart from animals. But, I have found that when it comes to making big decisions, I know what to do not

Continuing a career would simply be the pursuit of money and possessions.

Studying towards a PhD would perhaps make me smarter, but not wiser.

Serving with the Peace Corps is something much larger than any other thing I could see myself doing in the near future. I am also an avid photographer, but I do not believe the Peace Corps would stand in the way of that. On the contrary,

You can see the above page live [on the demo site](#)
