Adding a Gallery to a Page / Partial

You may benefit from this page if you are new to OctoberCMS.

It is super easy to add November Gallery to your page or partial. Simply drag-and-drop!

Then, you can use the component inspector to set your options:

You can include as many galleries on your page as you wish!

Known Issue

> OctoberCMS has a known issue where if a component is dropped into a partial then any CSS that is added to the page by the partial is never actually rendered. This only occurs if the partial is directly inside of a layout, and if the `{% styles %}` tag is included before the partial.
> Workarounds:
> - Add your `{% styles %}` *after* your `{% partial "..." %}`
> - OR Put your partial inside of a page, and include the page in the layout
> - OR Manually add the required CSS to your layout
