Example 1: Set the thumbnail size for all galleries

Why?

If you know that you will be using a bunch of galleries throughout your site, and you also know that on most of these galleries, you will want to show thumbnails of a specific dimension, then it's easier to set it in one place instead of in every individual gallery component.

How?

You can set the thumbnail size on the plugin backend settings page: **Settings → November Gallery → Thumbnails**. If you want more control, go to **Settings → Image Resizer Settings**
